

ASP's NEW COMPUTERIZED BREAK...

If your job requirements call for custom, high quality, complex architectural details longer than the standard 10' lengths, call ASP! We have added a new computerized 21' metal fold system to accomodate your needs.

Custom lengths up to 21' are now available!

Benefits of using longer details include:

- A higher efficiency rate with less material to handle - thereby reducing labor costs.
- Less overlap, so less chance of leakage.
- Aesthetically pleasing for designs calling for fewer seams.
